Static rolling three steel wheel roller is a mechanical equipment used for road construction and maintenance. It uses three steel wheels to compact the road, thereby improving its smoothness and load-bearing capacity. Compared to other types of rollers, the static rolling three steel wheel roller has the following advantages: good compaction effect: due to the use of three steel wheels, the compaction effect of the static rolling three steel wheel roller is better than that of the double steel wheel roller. The distance between steel wheels can also be adjusted as needed to adapt to different compaction requirements. Wide application range: The static rolling three steel wheel roller is suitable for various types of roads and sites, including asphalt pavement, cement pavement, airport runways, parking lots, etc. Simple operation: The operation of the static rolling three steel wheel roller is relatively simple, and only basic driving skills and precautions need to be mastered. Low cost: Compared to other types of rollers, static rolling three steel wheel rollers have a relatively low cost, making them more suitable for small and medium-sized construction projects.
