The global Static Wind Meter market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

A static wind meter, also known as a wind speed indicator or an anemometer, is a device used to measure the speed and direction of wind. It typically consists of multiple cups or vanes that rotate with the wind, and the rotation is converted into wind speed data.

The growing emphasis on renewable energy sources, such as wind power, has led to an increased need for accurate wind speed measurement. Wind farms and other wind energy projects require reliable wind data for site assessment, turbine placement, and optimal power generation. This drives the demand for static wind meters in the renewable energy sector. Static wind meters are widely used in weather monitoring stations for collecting meteorological data. They provide critical information for weather forecasting, climate research, and environmental analysis. As the demand for comprehensive and accurate weather data increases, the market for static wind meters is expected to expand. The market for static wind meters is expected to grow due to the increasing demand for renewable energy, growth in weather monitoring applications, expansion of outdoor recreational activities, integration with IoT and smart technologies, technological advancements, and the focus on safety and environmental monitoring.
