The global Stationary Demagnetizers market size is predicted to grow from US\$ 121 million in 2025 to US\$ 170 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

The stationary demagnetizer is a device used to remove residual magnetism from metal objects, widely applied in industries such as manufacturing, electronics, and precision instruments. It generates an alternating magnetic field that gradually reduces the magnetism on the object, returning it to a non-magnetic state. This device is typically designed as a fixed structure, making it easy to operate and use, capable of handling various shapes and sizes of metal items. The advantages of a stationary demagnetizer include high efficiency, reliability, and low maintenance costs, making it an essential tool for ensuring product quality and accuracy.

United States market for Stationary Demagnetizers is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
