The global Stationary Mine Compressed-Air Self-Rescue Device market size is predicted to grow from US\$ 27.99 million in 2025 to US\$ 45.79 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

The stationary mine compressed-air self-rescue device is a piece of personal protective equipment permanently installed near compressed-air pipelines, escape routes, or emergency refuge facilities in underground coal, metal, or non-metal mines. It utilizes the mine's compressed air supply to create a localized positive-pressure breathing zone. In the event of gas outbursts, fire smoke, toxic or hazardous gas influx, or ventilation anomalies, it provides personnel seeking refuge with a continuous supply of fresh air that has undergone pressure reduction, filtration, oil-water separation, and noise suppression. The device typically consists of a stainless steel or powder-coated steel enclosure, an air intake manifold, a shut-off valve, a pressure-reducing/regulating valve, a filter, an oil-water separator, a pressure gauge, a muffler, air supply hoses, and a protective hood or breathing mask. It performs functions such as pressure reduction, flow throttling, noise suppression, filtration, and on/off control. These devices are primarily deployed at coal mining faces, tunneling faces, blasting sites, manned areas within return air roadways, shaft-bottom stations, transport roadways, pump rooms, substations, long blind headings, and refuge chambers. The upstream supply chain includes stainless steel and carbon steel plates, copper and brass valve components, pressure-reducing valves, filters, oil-water separators, pressure gauges, mufflers, rubber and polyurethane hoses, silicone or rubber masks, protective hoods, seals, and fasteners. The midstream sector covers enclosure sheet metal fabrication and welding, pneumatic system design, assembly of valve groups and filtration units, testing of airtightness and air supply flow rates, noise testing, verification of flame-retardant and anti-static properties, application for mining safety certification, and final factory

inspection. The downstream market consists of coal mines and underground metal and non-metal mines.
