A Stationary Speed Enforcement System is a traffic enforcement technology used to monitor and control vehicle speeds on roadways.

Speed enforcement systems are technologies and tools used to monitor and enforce speed limits on roads and highways. These systems play a crucial role in improving road safety and reducing speeding violations. The global trend toward automated speed enforcement systems continues to grow. These systems use various technologies, including fixed and mobile speed cameras, radar, LIDAR, and in-road sensors, to automatically detect and record speeding violations. Speed enforcement systems are increasingly integrated with broader traffic management and control systems. This integration allows for real-time monitoring, data collection, and traffic flow optimization. The global market for speed enforcement systems is expected to continue evolving as governments and transportation authorities prioritize road safety and invest in advanced technologies to reduce speeding violations. Innovations in detection methods, data analytics, and integration with smart transportation systems will continue to shape the market's future.
