A Stationary Wave Machines, also known as a surf simulator, is a specialized device or system designed to replicate the experience of riding ocean waves in a controlled and stationary environment. These surf simulators are often used in water parks, surf parks, leisure facilities, and urban locations where access to natural waves may be limited.

Stationary wave machines use advanced wave-generation technology to create a standing wave in a specially designed pool or chamber. This technology typically involves the use of high-speed water jets. Operators can control and adjust various wave parameters, including wave height, speed, and shape, to accommodate surfers of different skill levels and preferences. The riding surface of the simulator is designed to replicate the feel of a surfboard on water, helping surfers practice balance, positioning, and maneuvering skills.

Stationary wave machines provide a convenient and accessible way for people to experience the thrill of riding waves, regardless of their proximity to natural surf spots. They have gained popularity in urban and landlocked areas where traditional surfing opportunities are limited. These simulators offer a fun and controlled environment for surfers to practice and enjoy the excitement of surfing.

The global Stationary Wave Machines market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
