The global Steady State Permeameter market size is predicted to grow from US\$ 1307 million in 2025 to US\$ 1792 million in 2031; it is expected to grow at a CAGR of 5.4% from 2025 to 2031.

A Steady-State Permeameter is a laboratory instrument used in soil mechanics and geotechnical engineering to measure the hydraulic conductivity (permeability) of soil samples. Hydraulic conductivity is a crucial property that determines how easily water can flow through a soil medium. Steady-state permeameters are designed to provide controlled conditions for conducting experiments that involve the flow of water through a soil specimen.

Steady-State Permeameters are increasingly equipped with digital controls and data acquisition systems. Automation allows for more precise control of flow rates and pressure measurements, reducing human error and improving repeatability.
