## Abstracts

The global Steam Continuous Fryer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The steam type heat changer oil fryer is one of the most typical indirect heat exchangers and are widely used in instant noodle production, having a long history in industrial applications and still dominate all heat exchangers. The difference and main challenge in a batch fryer versus a continuous fryer is the total amount of frying oil in the complete frying system compared to capacity. Normal continuous potato chips fryers have an Oil-Turn-Over-Rate of less than 8 hours whereas in a traditional batch fryer it can reach 35 – 40 hours.

Consumers are increasingly seeking healthier food choices, and this trend is driving the demand for steam continuous fryers. Steam frying is considered a healthier alternative to traditional deep frying, as it reduces the amount of oil absorbed by the food. Steam continuous fryers offer faster cooking times and healthier frying options, making them popular in the food industry. Energy efficiency and sustainability are important trends in the steam continuous fryer market. Manufacturers are developing fryers with advanced steam generation systems and improved insulation to minimize energy consumption. Additionally, environmentally friendly features, such as waste heat recovery systems and efficient heat transfer mechanisms, are being incorporated to reduce the environmental impact of the frying process. The steam continuous fryer market is witnessing trends such as growing demand for healthier food options, emphasis on energy efficiency and sustainability, advancements in technology and automation, customization for diverse product requirements, focus on food safety and compliance, and integration of digital monitoring and data analysis. These trends align with the industry's drive to provide efficient, sustainable, and high-quality frying solutions in

response to evolving consumer demands and regulatory requirements.
