The global Steel for Porcelain Enameling market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The steel for enameling is enamel coating on the surface of the steel plate to prevent the steel plate from rusting, so that the steel plate will not form an oxide layer on the surface when it is heated and can resist the erosion of various liquids

The enamelled steel market is an important segment within the steel industry and involves the production of special steel plates with enamelled coatings for applications with special requirements such as corrosion resistance, chemical resistance, and high temperature resistance. These steel sheets have undergone a special coating process to endow them with excellent physical properties and durability, making them widely used in various fields such as household appliances, kitchen utensils, industrial equipment, and sanitary ware. Characteristics of steel for enamelling include a smooth surface, resistance to chemicals and scratches, making it important in the manufacture of easy-to-clean surfaces and long-lasting products. With the increasing awareness of sustainable development and environmental protection, the market is also constantly looking for more environmentally friendly coating processes and materials to meet stringent environmental standards. The steel for enameling market is exhibiting steady demand across the globe, offering innovative solutions and high-performance material options for various industries.
