Steel Fabrication is the process involved in shaping, cutting and assembling components which are designed with steel. Industries in the fabricated steel sector transform steel into intermediate or end products, other than machinery, metal furniture, or treat metals and metal formed products fabricated elsewhere. Important fabricated steel processes are forging, stamping, bending, forming, and machining, used to shape individual pieces of the metal; and other processes, such as welding and assembling, used to join separate parts together. Establishments in this subsector may use one of these processes or a combination of these processes. The day to day technological advancements are boosting up the quality standards of production by creating a computer-aided design (CAD)/ computer-aided manufacturing (CAM) environment in the modern steelwork fabrication factories.

According to this study, over the next five years the Steel Fabrication market will register a xx% CAGR in terms of revenue, the global market size will reach US\$ xx million by 2023, from US\$ xx million in 2017.
