Steel structure anticorrosion paint is a coating product formulated to protect steel components from corrosion caused by exposure to oxygen, moisture, salt spray, chemical pollutants and other corrosive environmental factors, thereby extending structural lifespan. These paints often comprise epoxy resins or multi-component systems such as polyurethane / zinc-rich coatings, along with curing agents and additives, and can be applied via spraying, brushing, or rolling. They are widely used in bridges, industrial plant frames, petrochemical facilities, maritime docks, wind turbine towers, and similar steel infrastructure applications. The supply chain is structured as follows: upstream suppliers provide raw materials such as resins, fillers (e.g. zinc powder, aluminum powder), curing agents, solvents and chemical additives; downstream are end users in construction, infrastructure, marine, oil & gas, etc., as well as contractors and maintenance firms who purchase, apply, and periodically re-coat to maintain corrosion protection.

United States market for Steel Structure Anticorrosion Paint is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
