The global Steep Pulse Ablation System market size is predicted to grow from US$ 77.58 million in 2025 to US$ 105 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

The Steep Pulse Ablation System is a high-end minimally invasive therapeutic platform based on the principle of Irreversible Electroporation (IRE). By deploying multiple needle electrodes around the target tissue and delivering high-voltage steep-rising short pulses, the system creates permanent nanopores in cell membranes and induces apoptosis, enabling non-thermal, structure-preserving, and highly precise ablation. A complete system integrates a high-voltage pulse generator, pulse-modulation unit, multi-channel electrode interface, disposable or reusable electrode sets, imaging-guided navigation components, and workflow-oriented surgical software. Upstream inputs include high-voltage electronic modules, medical-grade alloy electrodes, insulation-coating consumables, surgical-grade metallic materials, and imaging localization/control software. Downstream users comprise oncology hospitals, interventional departments of general hospitals, cancer centers, ambulatory surgery centers, and research institutes, with applications in solid-tumor ablation, electrophysiology procedures, minimally invasive dermatology, and gene/cell research. In 2024, global production capacity is approximately 400 units, with around 223 units sold, an average price of USD 336,000 per system, and a gross margin of 40%–50%. Driven by the rapid advancement of non-thermal electric-field ablation technologies and rising demand for treating tumors in anatomically challenging regions, the market continues to expand steadily.

United States market for Steep Pulse Ablation System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
