OA is the most common degenerative joint disease. Its initial symptoms include loss of articular cartilage followed by progressive joint stiffness, swelling, pain, and loss of mobility. The prevalence rate of OA is extremely high, affecting more than 250 million people worldwide. With increases in the aging and obese populations, the prevalence of OA is predicted to increase to 67 million by 2030. Hence, an effective and safe OA treatment is urgently required.

Stem cells are the body's raw materials — cells from which all other cells with specialized functions are generated. Under the right conditions in the body or a laboratory, stem cells divide to form more cells called daughter cells. These daughter cells either become new stem cells (self-renewal) or become specialized cells (differentiation) with a more specific function, such as blood cells, brain cells, heart muscle cells or bone cells. No other cell in the body has the natural ability to generate new cell types.

The global Stem Cell Therapy for Osteoarthritis market size is projected to grow from US\$ 41.1 million in 2024 to US\$ 208 million in 2030; it is expected to grow at a CAGR of 31.0% from 2024 to 2030.
