## Abstracts

The global Stent Delivery Catheter market size is predicted to grow from US\$ 1614 million in 2025 to US\$ 2475 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

In 2025, global production of stent delivery catheters reached approximately 2.66 million units, with an estimated total production capacity of around 3.55 million units. The average unit price was about USD 620, and gross margins ranged from 45% to 70%, reflecting high technical barriers, stringent regulatory requirements, and strong clinical dependence. Manufacturing is characterized by low-to-medium volume, high-precision processes closely linked to interventional cardiology procedure volumes.

Stent delivery catheters are minimally invasive medical devices designed to deliver and accurately deploy coronary or peripheral stents at target vascular lesions. They combine a catheter shaft, balloon system, and stent crimping structure to ensure precise positioning, controlled expansion, and stable release, playing a critical role in percutaneous vascular interventions.

The industrial chain includes upstream materials such as medical-grade polymers, balloon films, metallic markers, coatings, and packaging materials. Midstream manufacturing covers extrusion, balloon forming, stent mounting, assembly, sterilization, and performance testing. Downstream demand comes from hospitals, catheterization laboratories, and cardiovascular intervention centers, supported by clinical training and technical services.

The stent delivery catheter market benefits from the continued expansion of coronary and peripheral vascular interventions worldwide. Increasing prevalence of

atherosclerotic disease, aging populations, and growing acceptance of minimally invasive treatments support stable procedural growth. Technological innovation focuses on improved deliverability, lower crossing profiles, enhanced pushability, and greater deployment accuracy, particularly for complex lesions. Hospitals and clinicians emphasize procedural safety, consistency, and compatibility with advanced stent platforms. Overall, the market is expected to grow steadily as interventional cardiology remains a core component of global cardiovascular disease management.
