The stereo phase deflectometer is a three-dimensional optical detection device based on the phase deflection principle. It analyzes the phase deflection of light waves caused by heat flow, stress, refractive index change, etc. on the surface of the object, thereby achieving non-destructive and high-sensitivity detection of the surface or internal structure of the target object. The instrument uses technical means such as interferometry, grating projection or thermal excitation to accurately capture tiny thermal field disturbances and material defects. It is often used in high-precision detection scenarios such as microelectronics, optical component detection, material thermal characteristics analysis and quality control.

United States market for Stereo Phase Deflectometer is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Stereo Phase Deflectometer is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
