Stereolithography (SLA) was the first 3D printing technology. An SLA printer makes use of mirrors, with one positioned on the X-axis and another on the Y-axis. These mirrors rapidly aim a laser beam across the vat of resin, curing and solidifying a cross-section of the object inside this build area, building it up layer by layer. Stereolithography (SLA) 3D printing has become vastly popular for its ability to produce high-accuracy, isotropic, and watertight prototypes and parts in a range of advanced materials with fine features and smooth surface finish.
