The report requires updating with new data and is sent in 48 hours after order is placed.

Stereolithography (SLA) was the first 3D printing technology. An SLA printer makes use of mirrors, with one positioned on the X-axis and another on the Y-axis. These mirrors rapidly aim a laser beam across the vat of resin, curing and solidifying a cross-section of the object inside this build area, building it up layer by layer. Stereolithography (SLA) 3D printing has become vastly popular for its ability to produce high-accuracy, isotropic, and watertight prototypes and parts in a range of advanced materials with fine features and smooth surface finish.
