## Abstracts

The global Sterically Hindered Amines TBEE market size is predicted to grow from US\$ 24.46 million in 2025 to US\$ 36.53 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Sterically hindered amine TBEE is a transparent liquid and a highly efficient and selective desulfurization solvent. Due to the steric hindrance effect of the tert-butyl group, it offers significant advantages in the selective removal of H<sub>2</sub>S and organic sulfur compounds (thiols, carbonyl sulfides, etc.).

The core upstream raw materials are tert-butylamine (TBA) and diethylene glycol (DEG) or ethylene oxide. The supply of tert-butylamine is affected by fluctuations in the price of isobutylene and ammonia, while the cost of diethylene glycol, a bulk petrochemical product, is significantly linked to crude oil prices.

Global sales in 2025 are projected to be approximately 4,000 tons, with an average market price of approximately US\$6,224 per ton. The industry's gross profit margin is in the range of 15%-30%.

United States market for Sterically Hindered Amines TBEE is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
