Sterile self-destructive fixed-dose vaccine syringe is a disposable medical device designed for vaccination. Its core structure consists of a polypropylene jacket, a stainless steel needle tube and a self-destruct mechanism (such as a buckle or steel clamp device). It is sterilized by ethylene oxide to ensure sterility. After use, the syringe needle or parts cannot be restored due to mechanical locking to prevent repeated use to avoid cross infection. This product complies with YY/T 0573.3-2019 industry standard, suitable for the precise injection of influenza, new crown and other vaccines, combined with the Chinese safety syringe industry's production of 2.47 billion units in 2024 (of which vaccine syringes account for about 30%-40%), exports of more than 500 million units and the growth in global vaccination demand (such as increased market penetration in Africa and Southeast Asia), and referring to the Chinese safety syringe market size of 524 million yuan (about 73 million US dollars) in 2023 and an annual growth rate of 15%-20%, the global sterile self-destructive fixed-dose vaccine syringe market size in 2024 is expected to be in the range of US\$800 million to US\$1.2 billion. In the next three years, it will benefit from the increase in global vaccination coverage (especially childhood immunization programs), the demand for emergency reserves for public health events and the iteration of biodegradable material technology, and is expected to exceed US\$1.5 billion in 2031.

United States market for Sterile Self-Destructing Fixed-Dose Vaccine Syringe is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
