A surgical sponge is a specialized sponge or pad used in surgery. Surgical sponge is used to absorb liquids from a surgical site. It may be used in combination with suction to keep a surgical site clear, by a surgeon working to control bleeding, and in a number of other applications. Like other things used in surgery, sponges are designed to be sterile; they come in their own sterile packaging and can be safely autoclaved. They are generally disposable and discarded after surgery in biohazard containers which hold other disposable surgical instruments and equipment.
