Sterile tissue retrieval bag is a medical device used during minimally invasive surgical procedures, particularly in laparoscopy or endoscopy. It is designed to safely contain and retrieve tissue specimens, stones, or foreign objects removed during the procedure. The bag is typically inserted through a small incision or port and then opened inside the body to capture the specimen. Once the specimen is securely enclosed, the bag is closed and removed from the body, allowing for its safe extraction without the risk of contamination or spillage.
