Stern driven propeller is a kind of marine propeller which converts the power of the engine into propulsion by rotating the blades in the air, or has two or more blades connected with the hub, and the backward surface of the blades is a helicoid or similar to a helicoid.

The stern drive propeller market has witnessed steady growth due to the demand for efficient propulsion systems in stern drive boats. Stern drive propellers play a vital role in converting engine power into thrust, enabling smooth and controlled movement of the boat. The market is driven by factors such as the increasing popularity of stern drive boats for recreational and commercial purposes, the need for improved fuel efficiency, and advancements in propeller technology.

Key considerations in the stern drive propeller market include factors such as pitch, diameter, number of blades, and the material used in construction. Manufacturers such as Mercury Marine, Volvo Penta, Michigan Wheel offer a diverse range of stern drive propellers to cater to different boat sizes, engine configurations, and performance requirements. These propellers are designed to optimize efficiency, reduce cavitation, and provide maximum thrust while maintaining durability and reliability.

The market is characterized by a focus on precision engineering, hydrodynamic design, and materials that withstand the demanding marine environment. Manufacturers employ advanced technologies, such as computer-aided design (CAD) and computational fluid
