A stick PC or PC on a stick is a single-board computer in a small elongated casing resembling a stick, that can usually be plugged directly (without an HDMI cable) on an HDMI video port. A stick PC is a device which has independent CPU or processing chips and which does not rely on another computer. It should not be confused with passive storage devices such as thumb drives.

One of the key drivers of the market includes rise in implementation of online learning methods which are accessed from remote locations using PC on a stick. Semiconductor miniaturization is another factor leading to the growth of the stick PC market. Increase in need of portable devices for accessing data, rise in demand for low energy consuming devices, and soar in demand for low cost portable devices are the factors driving the growth of the PC on a stick market.
