Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Stone plastic clay is clay processed from stone powder, so it is also called 'stone clay' and 'hardened clay'. Stone plastic clay has a fine and dense texture, excellent plasticity and ductility. Unlike ceramics, which are fired at high temperatures, Stone plastic clay only needs to be air-dried. When dried, it resembles plaster, with the rough and gritty feel of clay. And it has a certain hardness and weight, which is suitable for seal cutting, carving and other creations. After being coated with a special clay varnish, it can show a delicate luster like ceramics.

The global market for Stone Plastic Clay is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.
