Stone splitters are robust industrial machines designed to break large stones, rocks, or concrete blocks into smaller, precisely shaped pieces using controlled mechanical force. They typically operate through hydraulic or pneumatic systems that drive a wedge or blade into the stone, applying pressure until it splits cleanly along natural lines or pre-scored marks. Stone splitters are widely used in the construction, landscaping, and quarrying industries for processing granite, marble, limestone, and other hard materials into slabs, pavers, or decorative elements. Offering high accuracy, reduced waste, and lower labor demands compared to manual splitting methods, these machines are essential for efficient and consistent stone shaping.
