The global Stone Waxing Machine market size is predicted to grow from US$ 191 million in 2025 to US$ 265 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

Global sales of slab waxing machines will reach approximately 5,300 units in 2024, with an average price of approximately US$35,167 per unit and a gross profit margin of approximately 22%–26%. Slab waxing machines are surface treatment equipment that integrates a spindle motor, a brush-operated pressure regulator, a switching inverter, and a PLC control system, the motors and PLC systems account for over 55% of the total machine cost. They are primarily used for waxing the surfaces of granite, marble, artificial stone, and ceramic slabs, significantly improving the stone's gloss, water resistance, and stain resistance, thereby enhancing its commercial value and decorative properties. These machines are typically deployed in large-scale stone processing plants, artificial stone and ceramic slab production lines, and custom stone companies. A single machine can process approximately 450–600 slabs per day. The upstream and downstream supply chains primarily include upstream suppliers of core components such as switching inverters, spindle motors, pressure regulators, and PLCs, as well as downstream stone processing companies, architectural decoration manufacturers, and artificial stone manufacturers. Xingong Machinery has an annual production capacity of approximately 500 units, primarily targeting the stone processing cluster market in Shuitou, China, and South China.
