The global Straight-Through Electromagnetic Pulse Valve market size is predicted to grow from US\$ 113 million in 2025 to US\$ 145 million in 2032; it is expected to grow at a CAGR of 3.4% from 2026 to 2032.

In 2025, the global production volume of straight-through electromagnetic pulse valves is projected to reach 19.2317 million units, with an average selling price of \$6 per unit. The global annual production capacity for straight-through electromagnetic pulse valves stands at approximately 30 million units, with a gross margin of approximately 23.25%. The straight-through electromagnetic pulse valve is a common type of electromagnetically controlled valve characterized by the direct passage of fluid through the valve body, bypassing any pilot ports or diaphragm-assisted mechanisms, and by a valve core that is directly actuated by an electromagnetic coil. This type of solenoid valve achieves opening and closing through the interplay of electromagnetic forces and spring forces; it features rapid response times, a simple structure, and the ability to operate effectively at zero or low pressures, making it well-suited for low-flow applications. Upstream raw materials for straight-through electromagnetic pulse valves include various metal materials, electronic components, sealing materials, and more. The midstream segment consists of the manufacturers of these valves, while the downstream market is primarily concentrated in industries such as food processing, automotive, and petrochemicals.

The market for straight-through electromagnetic pulse valves is currently in a mature and stable phase of development. Core demand continues to be driven by the rigid requirements for the replacement and maintenance of bag-type dust removal equipment in downstream sectors, specifically cement, metallurgy, chemicals, and electric power. As national standards regarding industrial dust emissions become increasingly

stringent, the market is rapidly shifting toward high-efficiency, low-energy-consumption, and differentiated products featuring intelligent monitoring capabilities. The current competitive landscape within the industry is relatively fragmented; while the market is dominated by specialized manufacturers possessing precision machining capabilities and reliable sealing technologies, the overall barriers to entry remain relatively low. Consequently, product homogeneity is pronounced, and price competition is concentrated primarily within the segment of low-to-mid-range general-purpose models.
