A straight tube UV lamp is a type of ultraviolet (UV) radiation-emitting device with a linear, cylindrical structure, commonly used for disinfection, curing, or inspection purposes. It typically consists of a glass tube filled with a gas (such as mercury vapor) that emits UV light when an electric current is applied. The lamp produces specific UV wavelengths, such as UVC (200–280 nm) for germicidal disinfection, UVB (280–320 nm) for phototherapy, or UVA (320–400 nm) for curing coatings or inking. Designed for straightforward installation in fixtures, it is widely applied in healthcare facilities, laboratories, water treatment systems, and industrial production lines due to its high efficiency and uniform radiation distribution.
