Stranded Loose Tube Air-blown Micro Cable is an advanced type of optical cable. It is constructed by twisting multiple corrugated loose tubes together. Each loose tube contains several optical fibers. This design endows the cable with excellent moisture-proof and side-pressure resistance capabilities, as well as facilitating the management and maintenance of the optical fibers. With the support of the air-blown laying technology, this type of cable can be efficiently laid in pipelines without pre-burial, enabling rapid installation and expansion. Due to its high flexibility, scalability and adaptability, the Stranded Loose Tube Air-blown Micro Cable has become one of the important choices for modern communication network construction.
