The global Straw Briquetting System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Straw briquetting machine is a piece of equipment used to convert straw and other agricultural biomass residues into compacted briquettes. It applies pressure to compress the straw material, binding it together to form briquettes of various shapes and sizes. They provide a sustainable way to utilize agricultural residues like straw, which would otherwise go to waste or be burned. The compacted briquettes have higher density and energy content than loose straw, making them more efficient for storage, transport, and use as a fuel source.
