A streetlight control box is a power distribution and control device used in urban road lighting systems. It primarily centrally manages, protects, and controls the on/off and operating status of streetlight circuits. Typically installed at distribution points in public lighting areas such as roads, tunnels, parks, and plazas, it provides timing control, light control, remote control, telemetry, and fault alarms for multiple streetlight circuits. A streetlight control box typically contains components such as circuit breakers, contactors, relays, leakage protection devices, time/light control modules, control terminals, and communication modules. These enable functions such as time-of-day control, individual lamp monitoring, power consumption statistics, and overload, short-circuit, and leakage protection.

The upstream of the street light control box industry chain is mainly composed of raw material and component suppliers, providing steel and aluminum materials for metal boxes, and electrical components such as circuit breakers, contactors, relays, timers, controllers, sensors, communication modules, etc.; the midstream is the design, assembly and integrated manufacturing companies of control boxes, which are responsible for electrical system layout, box processing and intelligent control system integration; the downstream is mainly for the construction and operation and maintenance units of urban municipal lighting, road and bridge projects, industrial parks, residential communities, landscape lighting and other projects. These application industry companies realize centralized control, energy-saving scheduling and remote
