Abstracts

The global Stress Dietary Supplements market size is predicted to grow from US$ 894 million in 2025 to US$ 1756 million in 2032; it is expected to grow at a CAGR of 10.3% from 2026 to 2032.

Stress Dietary Supplements are orally ingested nutraceutical products—such as capsules, tablets, gummies, powders, liquid shots, and functional beverages—containing vitamins, minerals, amino acids, botanicals, adaptogens, and bioactive compounds formulated to help the body manage psychological and physiological stress responses by supporting autonomic nervous system balance, cortisol modulation, mood stabilization, and relaxation, positioned as non-pharmaceutical, preventive, and complementary tools for mental well-being, fatigue reduction, and resilience against daily stressors in work, study, and personal life.

The Stress Dietary Supplements industry chain starts upstream with cultivation and extraction of adaptogenic and calming botanicals, production of amino acids, vitamins, minerals, excipients, flavors, sweeteners, and functional beverage bases, then moves midstream to formulation design, contract manufacturing, tableting, encapsulation, gummy production, beverage filling, quality control, branding, packaging, regulatory and scientific substantiation, and private-label services, and finally extends downstream through pharmacies, supermarkets, specialty nutrition stores, online marketplaces, D2C subscription platforms, practitioners, corporate wellness channels, and end users seeking natural, convenient, and preventive stress management solutions integrated into daily routines.

Current and planned projects in the Stress Dietary Supplements market include capacity expansions for adaptogen-based gummy and beverage lines, development of
