The global Stretch Hood Packaging Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The stretch hood packaging machine is a device that uses stretch film to repackage stacked products as a whole for easy transportation and storage. The working principle of the stretch hood packaging machine is to roll the cylindrical film into a single empty bag with the bag bottom at the upper end, stretch the empty bag transversely and then cover it on the stacked products, and then shrink it by heat or cold. The shrinkage holds the film tightly against the product, forming a stable packaging unit. The advantages of the stretch hood packaging machine are fast packaging speed, good packaging effect, saving packaging materials, and it is suitable for products of various shapes and sizes.
