## Abstracts

The global Stretch and Shrink Wrap market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Stretch wrap, also known as stretch film, is a highly stretchable plastic film commonly made from materials like polyethylene. It is used for wrapping and securing items onto pallets or bundling smaller items together. Stretch wrap is characterized by its ability to stretch and cling to the items it covers, providing stability and protection during shipping and storage.

Shrink wrap, or shrink film, is a type of plastic film that, when heated, shrinks tightly over the items it is covering. It is commonly used for packaging individual products or bundling multiple items together. Shrink wrap creates a tight, tamper-resistant seal and is often used for retail packaging to enhance product presentation and protection.

The global market for stretch and shrink wrap products has been growing steadily due to their essential role in packaging and logistics. These films are widely used in various industries, including food and beverage, pharmaceuticals, manufacturing, and logistics. The market continues to expand as companies seek efficient and cost-effective packaging solutions to protect their products during transit and on store shelves.
