String inverters and central inverters are two types of solar inverters used in photovoltaic (PV) systems.A string inverter is a type of inverter that connects a series (or 'string') of solar panels to a single inverter. Each string can typically consist of 10 to 20 solar panels, depending on the panel's voltage and the inverter's input voltage range.A central inverter is similar to a string inverter but on a much larger scale. It’s used primarily in large commercial or utility-scale solar power systems. A central inverter typically manages the power conversion for hundreds or thousands of panels, organized into multiple strings.
