Strong cation exchange agarose chromatography medium is a bioseparation material with agarose as the matrix and strongly acidic cation exchange groups (such as sulfonic acid groups) immobilized on its surface. It is primarily used for the ion exchange chromatography purification of biomolecules such as proteins and peptides. This medium maintains a stable positive charge exchange capacity over a wide pH range, enabling highly selective binding and elution based on the surface charge differences of target molecules. It is widely used in the capture, removal, and purification steps of biopharmaceutical processes and is one of the key chromatographic packing materials commonly used in antibody, vaccine, and recombinant protein production. In 2025, sales volume was 380,000 vials, with an average price of \$180, total production capacity of 450,000 vials, and a gross profit margin of 87%.
