Strontium Oxide is a highly insoluble thermally stable Strontium source suitable for glass, optic and ceramic applications. Strontium oxide is a strongly basic, colorless oxide tHigh Purity (99.999%) Strontium Oxide (SrO) Powder that forms elemental strontium when heated with aluminum in a vacuum. Oxide compounds are not conductive to electricity. However, certain perovskite structured oxides are electronically conductive finding application in the cathode of solid oxide fuel cells and oxygen generation systems. They are compounds containing at least one oxygen anion and one metallic cation. They are typically insoluble in aqueous solutions (water) and extremely stable making them useful in ceramic structures as simple as producing clay bowls to advanced electronics and in light weight structural components in aerospace and electrochemical applications such as fuel cells in which they exhibit ionic conductivity. Metal oxide compounds are basic anhydrides and can therefore react with acids and with strong reducing agents in redox reactions. Strontium Oxide is also available in pellets, pieces, sputtering targets, tablets, and nanopowder

United States market for Strontium Oxide is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
