The global Structural Conductive Polymer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

A structural conductive polymer, also known as intrinsically conducting polymer (ICP), is a type of polymer that inherently possesses electrical conductivity without the need for additional conductive additives or fillers. Such compounds may have metallic conductivity or can be semiconductors.

The increasing demand for electronic devices, displays, touchscreens, and wearable electronics has created a need for materials that can provide both electrical conductivity and optical transparency. Structural conductive polymers fulfill this requirement, driving their adoption in various electronic and optoelectronic applications.
