## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Structural fumigation is a pest control method that involves filling the airspace within a structure with a toxic gas. A tarp, or tent, is used over the structure to trap the gas inside. The gas penetrates cracks, crevices, and pores in the wood to eliminate pests, such as drywood termites and bed bugs. After the tarp is removed, fans are used to help the gas escape into the atmosphere. Leftover residues are not expected to remain on surfaces.
