Structural Suspended Ceiling Systems is a ceiling system designed for use in commercial and industrial buildings. Its main feature is its strong structural support capacity and the ability to carry heavier loads such as lighting equipment, air conditioning equipment and other accessories. This type of ceiling system typically consists of a structural grid frame, usually made of metal, that supports the ceiling panels by being suspended from the ceiling or beams of the building structure. This structural design allows the ceiling system to withstand larger loads while maintaining the aesthetics of the design.
