Structural turnout gear, also known as bunker gear, is specialized protective clothing worn by firefighters during firefighting operations. This gear is designed to provide maximum protection against extreme heat, flames, and hazardous environments typically encountered in structural fires. It includes several layers: an outer shell made from fire-resistant materials, a moisture barrier to prevent water penetration, and a thermal barrier to insulate against heat. Components of structural turnout gear include a coat, pants, helmet, gloves, boots, and sometimes a hood, all designed to ensure durability, flexibility, and safety. This gear is essential for protecting firefighters from burns, injuries, and other dangers while allowing them to perform their duties effectively.
