The report requires updating with new data and is sent in 48 hours after order is placed.

Structured data archiving (SDA) software moves data from custom-provided or commercially provided applications to an alternate file system or database management system (DBMS) while maintaining data access and referential integrity. Reducing the volume of data in production instances can improve performance and shrink batch windows. It can also reduce storage acquisition costs, facility requirements, environmental footprints and the cost of preserving data for compliance when retiring applications.
