A Struvite Mitigation Agent is a chemical or biological treatment solution specifically formulated to prevent or reduce the formation of struvite—a crystalline compound composed of magnesium, ammonium, and phosphate—that frequently precipitates in wastewater treatment and sludge handling systems. These agents work by altering the chemical conditions that favor struvite crystallization, either by sequestering magnesium or phosphate ions, adjusting the pH, or introducing inhibitors that disrupt crystal growth and nucleation. By mitigating struvite accumulation, these agents help maintain optimal flow in pipes, protect pumps and centrifuges from scaling damage, and reduce maintenance downtime. Struvite mitigation is critical for improving operational efficiency, prolonging equipment life, and ensuring compliance with environmental and discharge regulations in municipal and industrial wastewater facilities.

United States market for Struvite Mitigation Agent is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
