Disposable Surgical Cables are a type of medical device that are used to connect surgical instruments, such as electrosurgical generators, electrodes, or forceps, to a power source during surgery. Disposable Surgical Cables are made of flexible and biocompatible materials, such as silicone, polyurethane, or PVC, and have various connectors, such as banana plugs, alligator clips, or pin sockets. Disposable Surgical Cables are designed to be used only once and then discarded, to prevent cross-contamination, infection, or damage to the instruments or the patients. The industry trend of Disposable Surgical Cables is positive and growing, as the demand for electrosurgery is increasing in various surgical specialties, such as general surgery, gynecology, urology, neurology, and cardiology. The major drivers for the market growth are the rising prevalence of chronic diseases, the increasing number of surgeries, the technological advancements in electrosurgical devices, and the growing preference for minimally invasive procedures. The major challenges for the market growth are the high cost of electrosurgical devices, the risk of complications and injuries associated with electrosurgery, and the impact of COVID-19 pandemic. The market players are focusing on developing new technologies and products to overcome the challenges and meet the

customer needs.
