Styrene-ethylene-propylene-styrene, also known as SEPS, is a thermoplastic elastomer (TPE) which behaves like rubber without undergoing vulcanization. SEPS is very flexible, has excellent heat and UV resistance and is easy to process. It is produced by partial and selective hydrogenating of styrene-isoprene-styrene copolymers (SIS)¹ which improves the thermal stability, weathering and oil resistance, and makes SEPS steam sterilisable.² However, hydrogenation also reduces the mechanical performance and increases the cost of the polymer.
