Sublimation printing is a digital printing technology that enables the reproduction of various customized and personalized color prints or images to various specially coated surfaces including plastics, films, woods, textiles, ceramics, metals etc. In sublimation printing process, the solid printing dye is sublimated into a gas at high temperatures and is exposed to the surface to be printed. The gas thus formed penetrates the polymeric surface, creating permanent bonds with it. This process gives high resolution and permanent coloration to the exposed surface, which is highly resistive to peeling and cracking off surface of the material.
