Submarine transmission cables are submarine cables responsible for transmitting power from offshore wind power. According to their different functions, offshore wind power submarine cables can be divided into in-array submarine cables and submarine transmission cables. The in-array submarine cables are mainly used to collect the electric energy generated by wind turbines and transmit it to the offshore boosting station. The current mainstream voltage of in-array cable is 35kV and is developing towards 66kV. The submarine transmission cable is responsible for transmitting the boosted electric energy to the land centralized control center, the current mainstream voltage is 220kV and is developing towards 330kV and 500kV.

The global Submarine Transmission Cable market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
