The global Submerged Arc Weld Pipes (SAW) market size is predicted to grow from US\$ 9893 million in 2025 to US\$ 11980 million in 2031; it is expected to grow at a CAGR of 3.2% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

This report focus on Submerged Arc Weld Pipes (SAW) market. SAW or Submerged Arc Weld, as the name suggests, is a manufacturing method for large diameter Welded Pipes. SAW pipes are mainly are classified into Helical / Spiral SAW (HSAW) and Longitudinal SAW (LSAW). Generally large diameter pipes from Size 324mm onwards can be manufactured in LSAW construction and Size 406mm onwards in HSAW construction.

Submerged Arc Welding (SAW) process involves formation of an arc between a continuously fed bare wire electrode and the work-piece. The process uses a flux to generate protective gases and slag, and to add alloying elements to the weld pool. A shielding gas is not required. The arc moves along the joint line and as it does so, excess flux is recycled via a hopper. Remaining fused slag layers can be easily removed after welding. As the arc is completely covered by the flux layer, it is not normally visible during welding and heat loss is also extremely low.
