The Production is about 240 k units. Submersible Cargo Pumping System is a cargo handling system in which electric pumps are installed directly inside a ship's cargo tanks to transfer liquid cargoes such as crude oil, petroleum products, chemicals, or liquefied gases. Unlike traditional deepwell or external pump-room systems, the pump and motor are submerged in the cargo itself, allowing direct suction from the tank bottom. This configuration improves discharge efficiency, reduces residual cargo, and eliminates long shaft lines and pump rooms, thereby enhancing operational safety and minimizing vapor emissions.
