The Submersible Irrigation Pump is a water pump designed for agricultural and horticultural irrigation that can be fully immersed in water. The pump is driven by a sealed electric motor and directly draws water from a well, pond, river or other water source into the irrigation system, providing a continuous and efficient water flow. Due to its unique submerged design, the submersible irrigation pump does not require additional water suction devices and can avoid the cavitation problem of conventional pumps under high head and low water level conditions.
